#226 — AUGUST 30, 2018

[READ ON THE WEB](#)

Golang Weekly

```
// Uniq is a channel filter that removes
// repeated values from the data stream.
```

```
func Uniq(in <-chan T) <-chan T {
    out := make(chan T)
    go func() {
        v := <-in
        out <- v
        for next := range in {
            if v != next {
                v = next
                out <- v
            }
        }
    }()
}
```

Go 2 Draft Designs — A “draft design” is the precursor to an official proposal to change the language. The three draft designs here focus on error handling, error values, and...(wait for it)...generics! There’s also [a video](#) explaining these developments.

GOOGLE

Go 1.11 Released — If they’re going to release on Fridays, we might have to move the newsletter to Saturdays(!) :-). Nonetheless, the latest major release of Go is here and introduces both [modules](#) and experimental WebAssembly support. [Full release notes here.](#)

ANDREW BONVENTRE

Data-Driven Guide to Level-Up Your Engineering Team  — We analyzed 10M+ commits & share how you can include data-driven insights to increase velocity. Empowering teams with deep git visibility to determine what’s working, celebrate victories & quickly identify risks. [Request a free trial.](#)

GITPRIME 

Defer: Sweet, But No Syntactic Sugar — Sure, `defer` is a convenient language feature, but it changes the semantics of a function so you’d best know how and why.

JULIEN CRETEL

Microsoft Announces Project Athens and GopherSource Involvement — [Athens](#) is a “Go module datastore and proxy” and [GopherSource](#) is an effort to strengthen the Go ecosystem by encouraging contributors to community projects.

MICROSOFT

HTTP/2 Adventure in the Go World — The Go standard library `net/http` package supports HTTP/2 now. Well, mostly.

EYAL POSENER

GopherJS 1.11-1 Released — While Go 1.11 can compile to WebAssembly, GopherJS is more mature, established, and has plenty of utility left to use. GopherJS 1.11-1 adds support for Go 1.11 specifically.
